

How to run Bluetooth on your Smart Phones

CAUTION—From previous experience, please ensure the Bluetooth Robot is on the ground before continuing.

Pat McMahon V1 16/8/2022

Android Phone uses (HC-05) Bluetooth Module

1— Go to the Play Store and install the Arduino Bluetooth RC Controller App, on your Android Phone.

Arduino Bluetooth RC Controller

2— Then ensure the Bluetooth Module is turned on and Blinking on your Robot.

3 — Scan for Devices & select the Bluetooth HC-05 Paired Device Code

4 — On the Options Menu button  select Connect to Car option.

If connected, the RED Dot will turn GREEN after about 5 seconds, if not try again.

5 — When you have finished playing with your Bluetooth Robot, select the disconnect to car on the Option Menu.

i Phone uses (BT-05/HM-10) Bluetooth Module
